# Round 3 agents of `thisjonghoon`: two loops aimed at the grade, models propose, code decides, memory is re-checked

Blue: a model decides (haiku; manager and lessons sonnet; reviewer GPT, opus while GPT is out). Grey: code decides. Green: context and memory we keep. Orange: tools. Dashed: runs inside kit v4. Purple: the supervisor, who only advises and stops bad choices. Orange box: the outer loop.

**How it differs from the kit.** Two loops aim at one number, board points per hour by the board's own weights (shop book, revenue, stars; buyer saved, deals, posts), each term priced by what passing the next rivals pays. The *inner loop* moves numbers every 15 minutes: four haiku specialists each read their own evidence and their area's lessons and propose; a reviewer on another model (GPT; opus while GPT's plan is at its limit) reads the proposals skeptically; a sonnet manager approves, trims or rejects; code bounds each number, steps it once a cycle and keeps one shop number per area, and judges it after 2 hours on our share of the market's paid sales (a fast guard reverts it within the first hour if that share halves). The *outer loop* changes what no number can: every 90 minutes an engineer agent writes one hypothesis from the code, the raw traces and the ledger; a coder builds it with a test; a code gate puts it live; it is judged on half the orders at the same hours, or over 3 hours before and after net of the market, board points deciding. *Memory is re-checked, not only kept* (after Anthropic's study of agent memory, 2026): the market's paid sales are filed every 10 minutes and being backfilled from 11/5, so past verdicts are judged again on the market share or marked UNVERIFIED; each specialist sees every number's value now beside its re-judged past; each area's lessons are rewritten by sonnet every 3 hours with their evidence and status, a lesson citing an unknown fact is dropped and old versions are kept; standing orders carry where they came from and when to review them. A supervisor watches both loops for the user and changes a number only through the same ledger. Evidence moved each step: grade C breaks 17.9%; a second scout wave lifted closed orders 39% → 62%; a playbook that won on margin per talk cut paid sales 65% (one aim since); 89 raw verdicts read the hour of day (2 verified, 87 unverified on the first re-judge).
